yard management

overview

trusted by

Nestlé® GXO

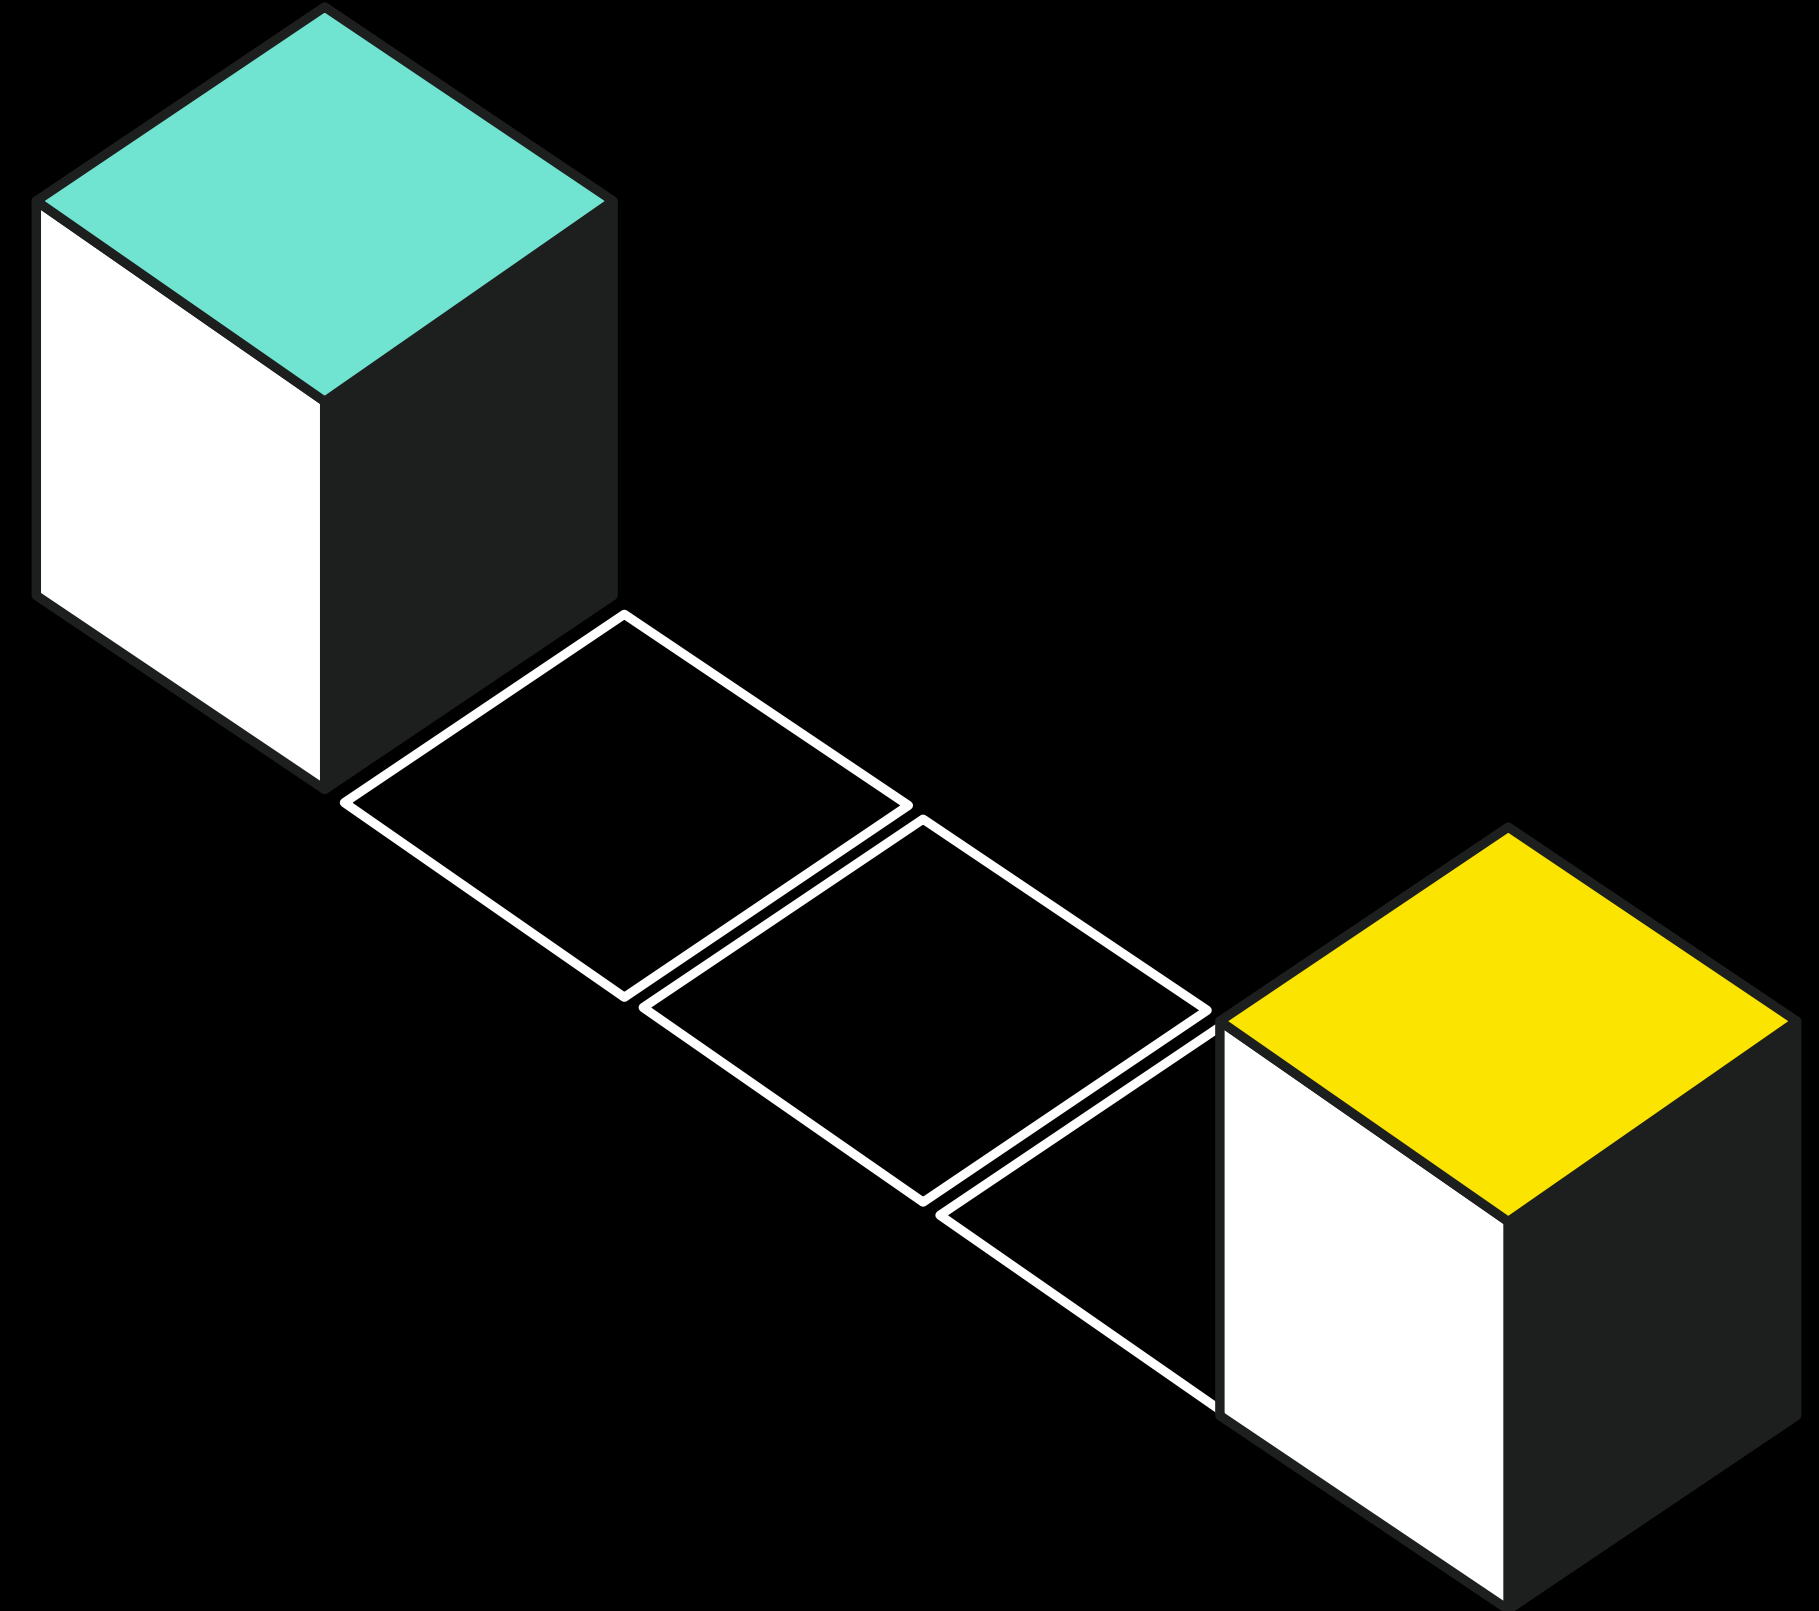

**our modular yard operating
system will integrate
seamlessly with your bespoke
yard operations**

our yard operating system can streamline your site in multiple ways

here are some of the benefits to integrating yard sauce into your sites

boost efficiency

Our systems are designed to streamline the transition of goods from your yard to the warehouse, and then back onto the road. This holistic approach can significantly reduce turnaround times, increase throughput, and enhance overall productivity. By optimising these key processes, our solution contributes to the efficiency and performance of your operations, ultimately driving business growth.

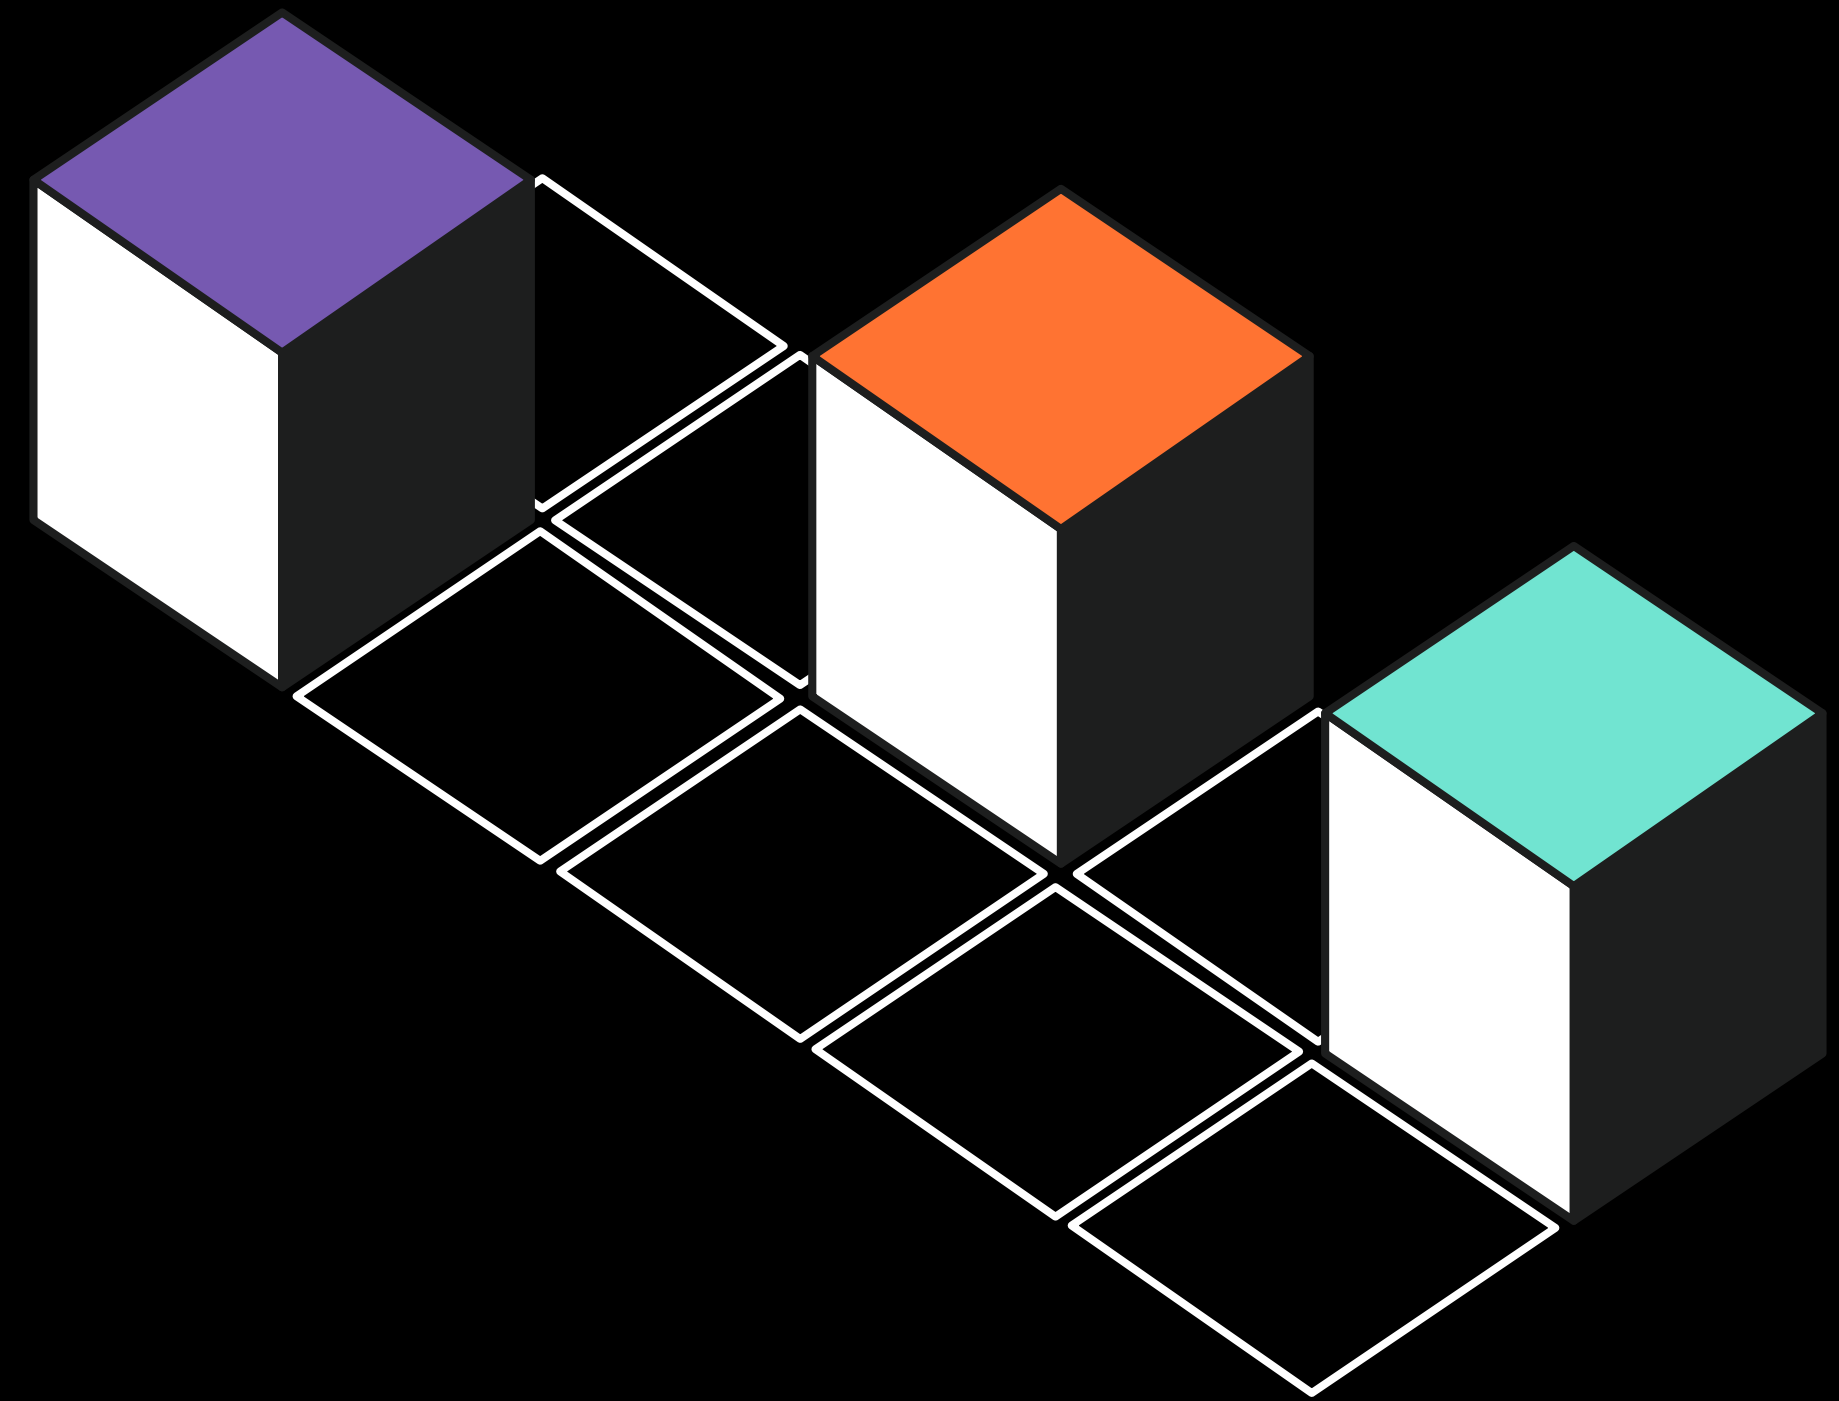

real time visibility

Obtain real-time insights and gain confidence in understanding your yard's inventory. With our system, you will be able to anticipate if a suitable trailer is unavailable for an upcoming outbound journey, allowing for proactive problem-solving. By identifying and addressing bottlenecks before they disrupt your operations, our solution ensures smooth workflow continuity and optimal yard performance.

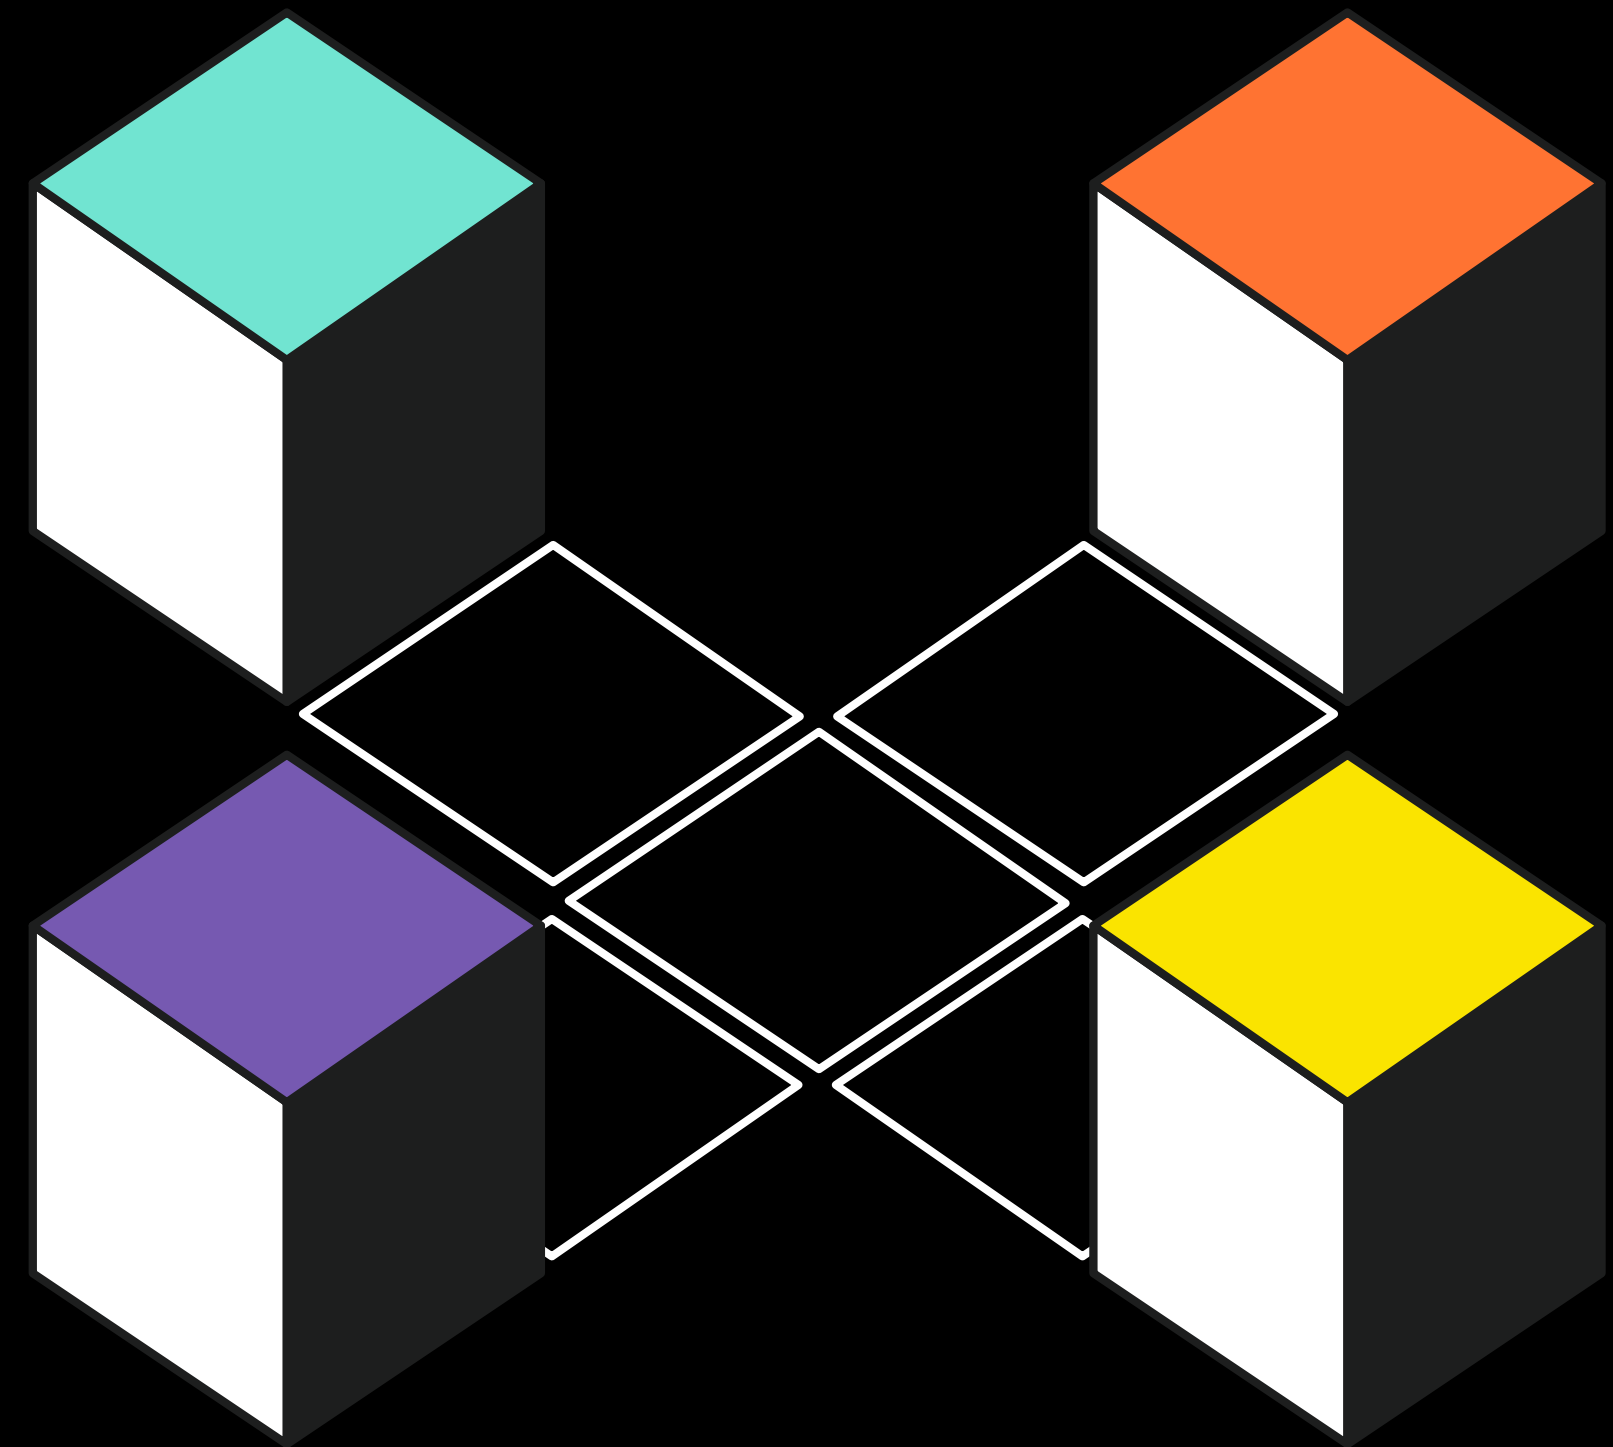

better planning

Gain easy access to historical yard data to identify recurring patterns, enabling your team to make informed decisions during the planning process. Leveraging this historical data allows for predictive analysis and strategic planning, resulting in more efficient yard management and improved operational efficiency.

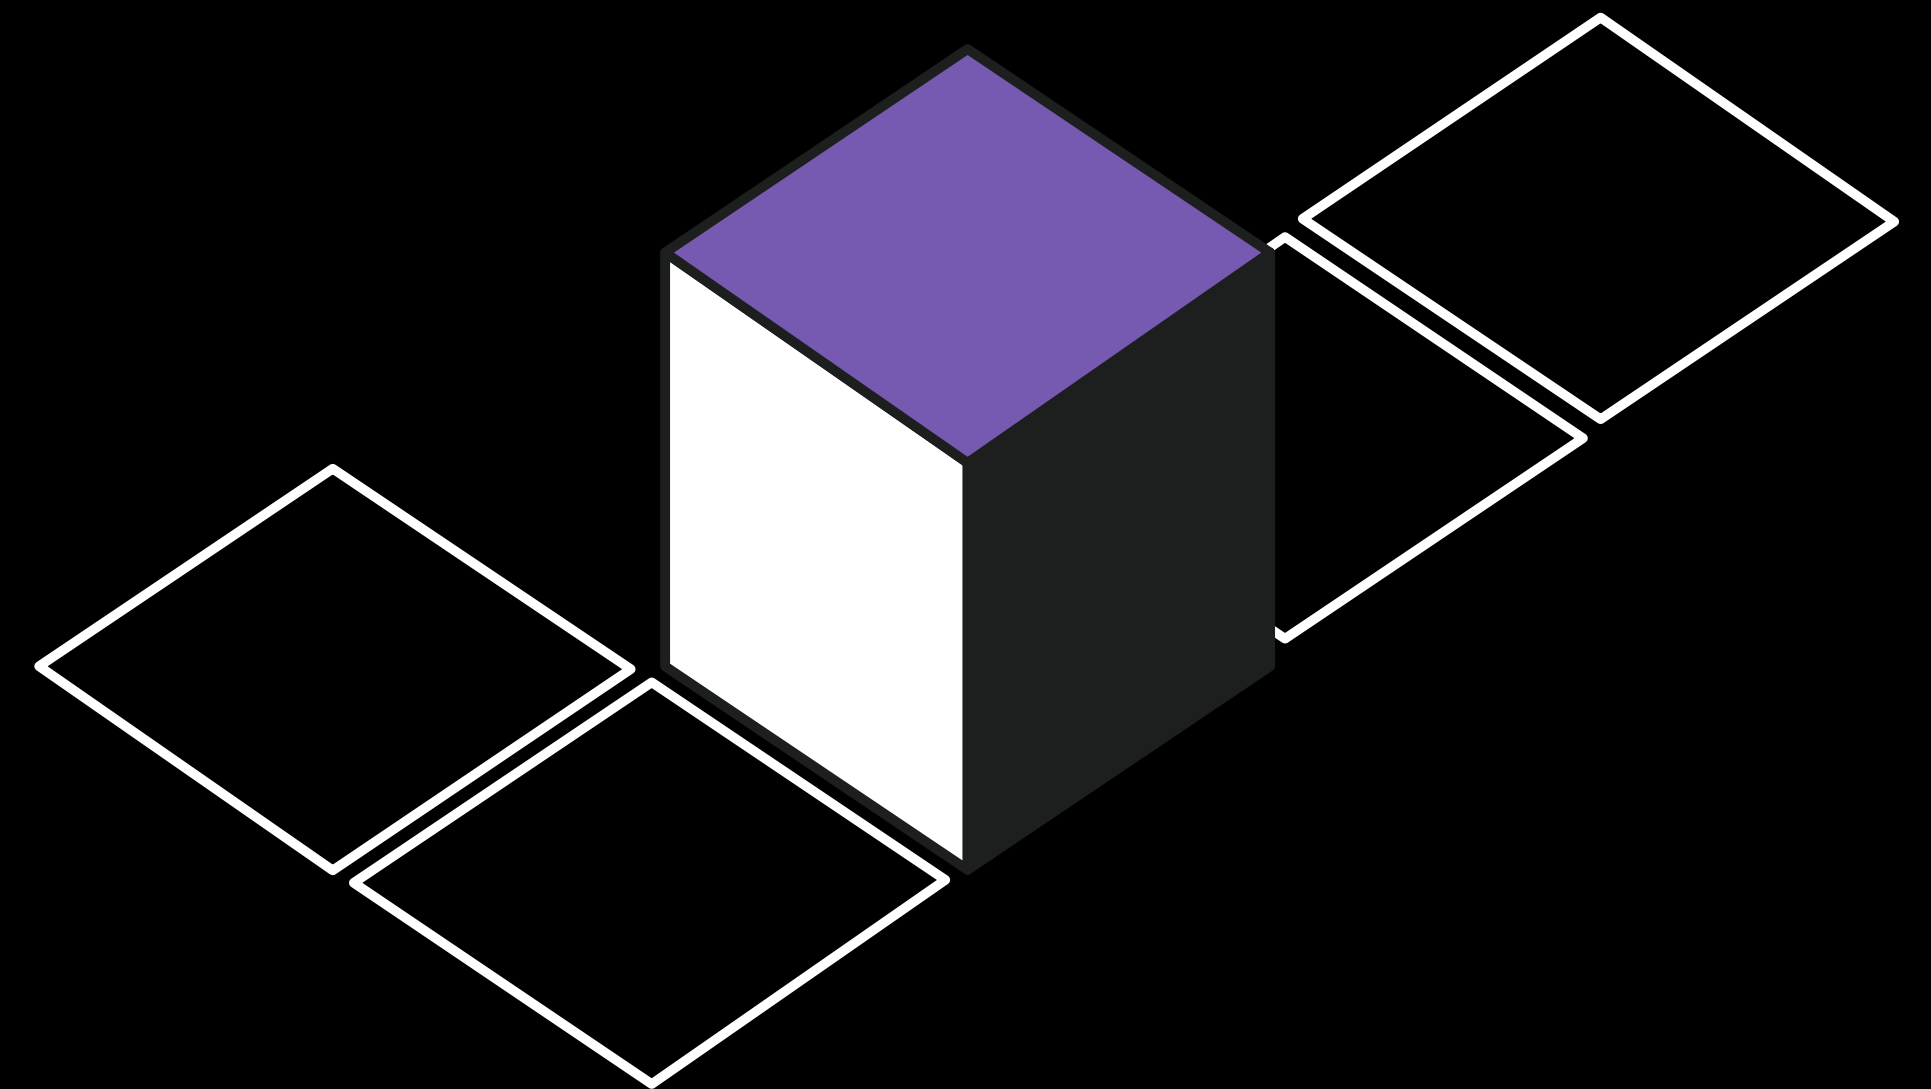

improve safety

Eliminate the requirement for on-ground staff to physically navigate your yard for trailer tracking and cargo checks. Provide clear multilingual health & safety instructions to drivers arriving on site for the first time. Improve dock safety by keeping drivers informed when their vehicle is ready to move.

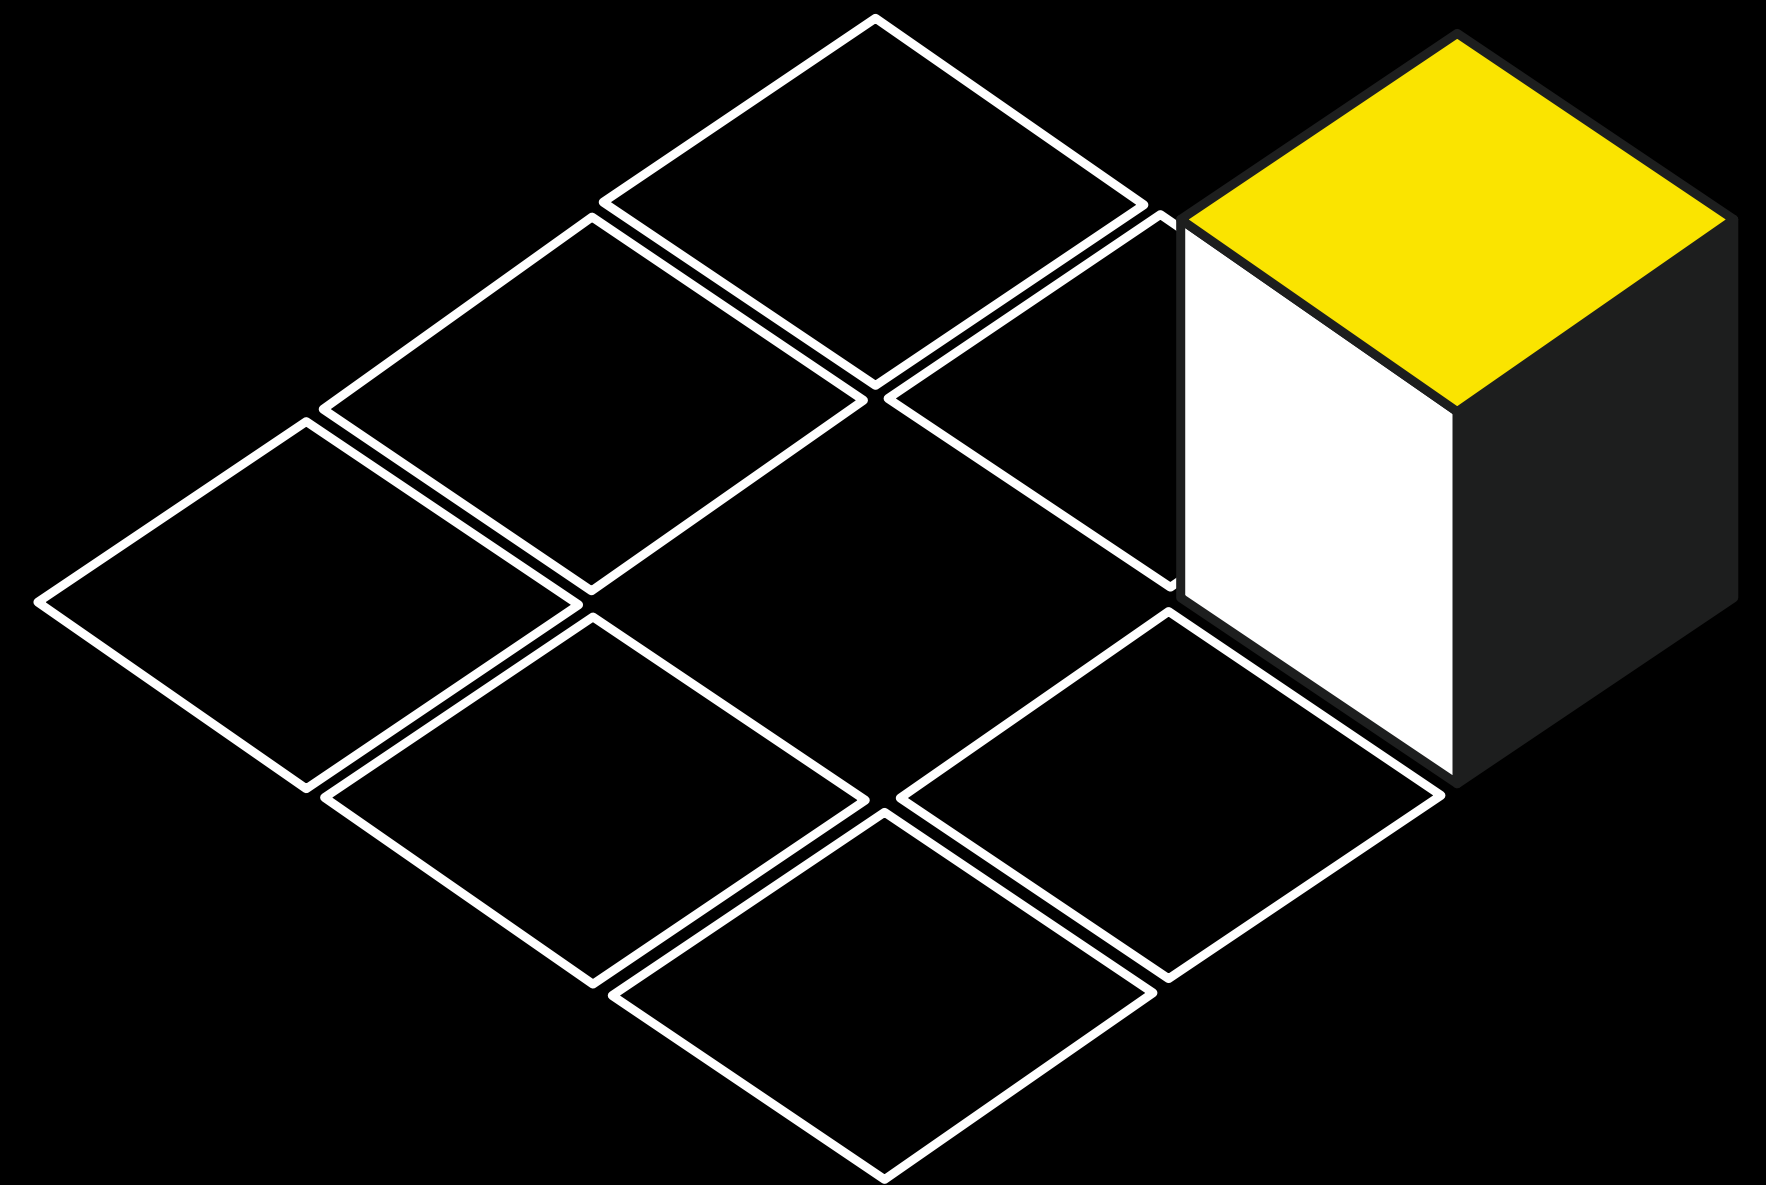

integrate your yard data company wide

Our yard operating system is modular and driven by modern APIs. This enables us to efficiently connect with a variety of external systems, such as journey calendars, warehouse management systems, and beyond.

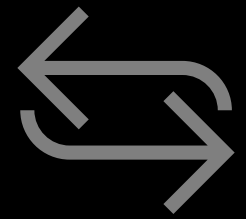

pay for what you use

Our pricing is tailored to your specific needs, allowing you to only pay for the features you use and the volume of activity your site requires each month. This makes our services accessible for those who simply wish to manage bookings, while also providing extensive options for those who wish to optimise their entire operational process. The more transactions your site performs, the more cost-effective the pricing becomes.

our modules

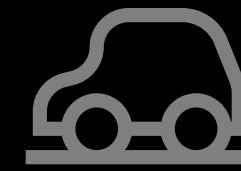

yard sauce can provide the following
modules to your yard

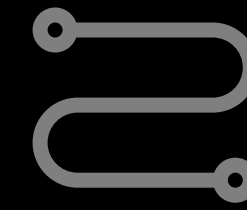

journey booking

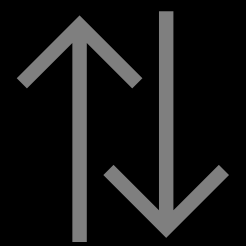

gatehouse app

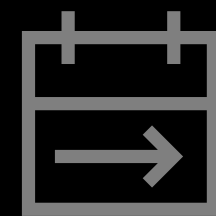

yard space
management

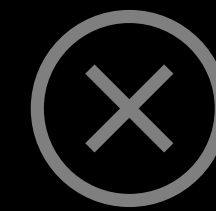

shunter app

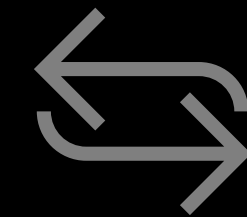

warehouse bay
management

driver flightboard

trailer
maintenance
tracking

analytics
dashboard

See it in action

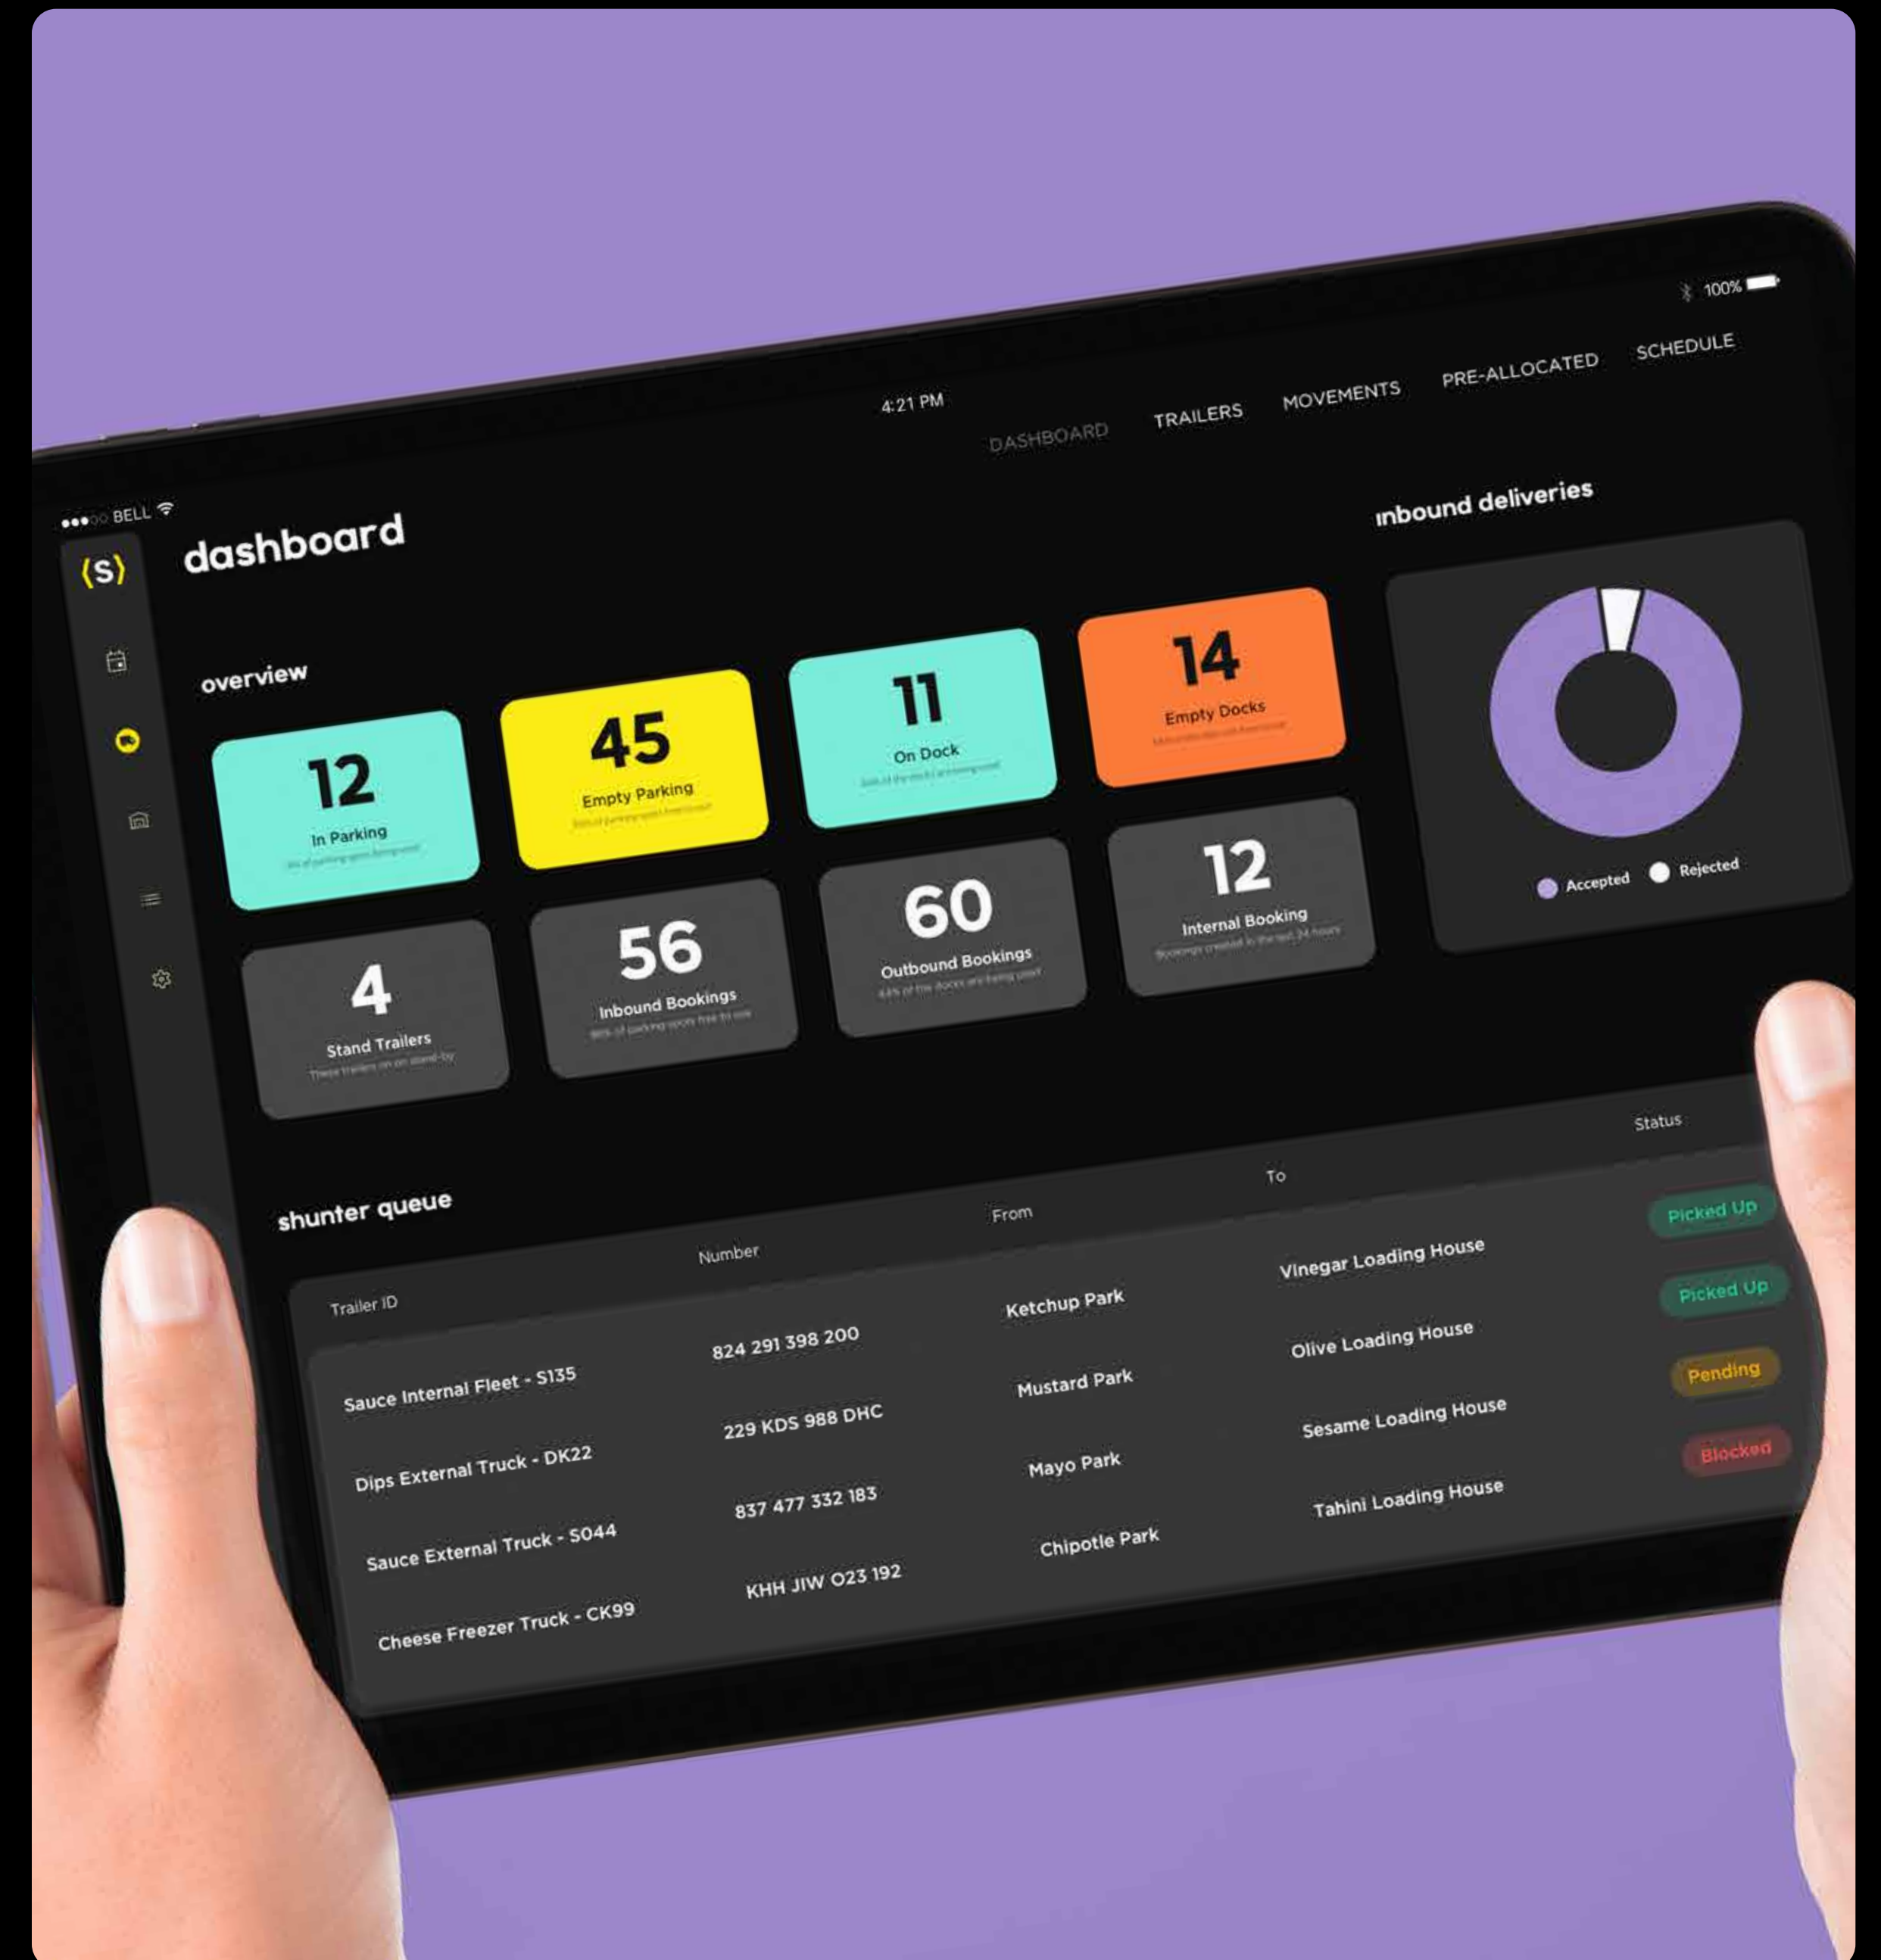

yard sauce

GXO required a completely bespoke platform developing to meet its objectives. Sauce developed a fully configurable workflow platform to allow GXO to track all of their assets through different locations and states for each of their clients.

At any moment in time GXO, their clients, suppliers or wash sites are able to see an exact snapshot of data so they can understand their needs, in terms of levels of assets, and their tasks. As well as that, using a prediction model, it is possible for GXO to understand where potential future issues may arise in the reverse supply chain.

All of the system is built to work on mobile devices up to desktop devices, so can be accessed anywhere at any time.

The data is also accessible to the GXO data lakes, so that additional reporting can be completed.

fully iso 27001 certified cloud based solution

When it comes to information security and data privacy we've got you covered. Our platform is fully ISO 27001 certified and uses cutting-edge technology to give you peace of mind that your data is safe in our hands.
